January 15, 2015

## Introduction and Project Goals

- Big Picture

- Implementation

## Prototype demonstration and discussion

- Refine big picture to current demo

- Protocol Execution

- Appraisal

- Attestation Protocol Execution

- Measurement

- Communication

## Short term goals and milestones

## Questions and guidance

## Trust in the Cloud

Provide new capabilities that establish and maintain trustworthy cloud-based application deployment

- ▶ Establish trust among cloud components
  - ▶ trust among cohorts of processes
  - ▶ trust among processes and environment
- ▶ Promote informed decision making
  - ▶ data confidentiality can be confirmed
  - ▶ execution and data integrity can be confirmed
- ▶ Autonomous run-time response and reconfiguration
  - ▶ responds to attack, failure, reconfiguration, and repair
  - ▶ response varies based on measurement

- ▶ Lightweight integration with existing cloud infrastructure
  - ▶ OpenStack cloud infrastructure
  - ▶ Xen+XSM VM infrastructure
  - ▶ Fedora, HotSpot JVM, GHC
- ▶ Trusted Computing Group standards compliant
  - ▶ Trusted Platform Module 1.2
  - ▶ TCG vTPM (in principle)
  - ▶ Trusted OS infrastructure
- ▶ Standard communication mechanisms
  - ▶ JSON structures for all exchanged data
  - ▶ *vchan* for on-platform communication
  - ▶ TCP/IP for off-platform communication

- ▶ Trustworthy protocol execution
  - ▶ executable protocol representation
  - ▶ protocol execution generates evidence of trustworthiness
  - ▶ highly focused protocols
  - ▶ strand space formal semantics
- ▶ Application specific measurement
  - ▶ managed and traditional execution environments
  - ▶ compile-time assistance for measurer synthesis
  - ▶ specialized measurement bundled with applications
- ▶ Attestation driven cloud application and data management
  - ▶ health monitoring
  - ▶ problem mitigation
  - ▶ application migration
  - ▶ access control

# Research & Development Plan

- ▶ **Development and integrate measurement capabilities**
  - ▶ hosted languages (Java)
  - ▶ traditional compiled languages (C, C++)
  - ▶ integrate with environment measurers (Xen, OpenStack, OS)
- ▶ **Develop attestation capabilities**
  - ▶ flexible, user configurable protocol representation
  - ▶ measured protocol execution
  - ▶ protocol execution appraisal
- ▶ **Develop infrastructure trust argument**
  - ▶ develop lightweight vTPM infrastructure supporting mobility
  - ▶ launch from known roots of trust
  - ▶ maintain trust evidence at run time
  - ▶ maintain trust over migration

# Research & Development Plan

- ▶ Automated synthesis and verification
  - ▶ measurer synthesis at application compile time
  - ▶ automated evidence appraisal from protocols
  - ▶ formal trust argument
- ▶ Demonstrations
  - ▶ initial simple infrastructure demonstrations
  - ▶ cloud-based “big data” environment demonstration
  - ▶ federated trust demonstration
  - ▶ *demonstrations as discovered/directed*
- ▶ Scale up and roll out
  - ▶ integration with Xen, OpenStack, Linux
  - ▶ installation management and packaging
  - ▶ effective web presence

# Armored Application Architecture

- ▶ Focus is user-space applications
- ▶ Assesses the cloud infrastructure and environment
- ▶ Attests to the state of its application
- ▶ High-assurance, lightweight infrastructure
- ▶ Influenced by the *Trusted Research Platform* and *Principles of Remote Attestation*

# System-Level Architecture

# What We Are Demonstrating

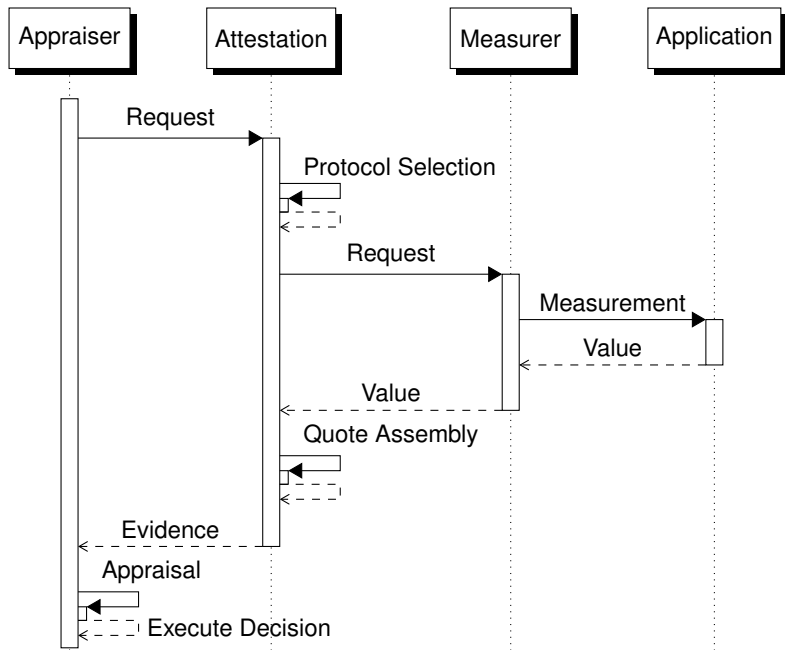

- ▶ Execution of a CA-based Attestation Protocol
  - ▶ Attestation request
  - ▶ Protocol execution
  - ▶ Evidence appraisal
- ▶ Major architectural subsystems
  - ▶ Appraiser
  - ▶ Attestation Manager
  - ▶ Measurer
  - ▶ Instrumented JVM
  - ▶ vTPM and Certificate Authority
- ▶ Anomaly Detection
  - ▶ Bad signatures and PCRs
  - ▶ Bad CA certificates
  - ▶ Bad quotes and AIKs
  - ▶ Bad measurements

# Abstract CA-Based Attestation Protocol

# Abstract CA-Based Attestation Protocol

# Message List Representation

*App*  $\rightarrow$  *Att* :  $d, N_{App}, PCR_m$  on  $C_{AppAtt}$

*Att*  $\rightarrow$  *TPM* : *make\_and\_load\_identity* on  $C_{AttTPM}$

*TPM*  $\rightarrow$  *Att* :  $AIK^+, AIK_h$  on  $C_{TPMAtt}$

*Att*  $\rightarrow$  *CA* :  $Att, AIK^+$  on  $C_{AttCA}$

*CA*  $\rightarrow$  *Att* :  $\{K, |AIK|\}_{EK^+}, \{[AIK^+]_{CA-}\}_{K^+}$  on  $C_{CAAtt}$

*Att*  $\rightarrow$  *TPM* : *activate\_identity*( $AIK_h, |AIK|$ ) on  $C_{AttTPM}$

*TPM*  $\rightarrow$  *Att* :  $K$  on  $C_{TPMAtt}$

*Att*  $\rightarrow$  *Meas* :  $d$  on  $C_{AttMeas}$

*Meas*  $\rightarrow$  *Att* :  $e$  on  $C_{MeasAtt}$

*Att*  $\rightarrow$  *TPM* : *quote*( $AIK_h, PCR_m, |(e, N_{App}, [AIK^+]_{CA-})|$ ) on  $C_{AttTPM}$

*TPM*  $\rightarrow$  *Att* :  $PCR_c, [|PCR_c|, |(e, N_{App}, [AIK^+]_{CA-})|]_{AIK-}$  on  $C_{TPMAtt}$

*Att*  $\rightarrow$  *App* :  $e, N_{App}, PCR_c, [AIK^+]_{CA-}$  on  $C_{AttApp}$

*Att*  $\rightarrow$  *App* :  $[|PCR_c|, |(e, N_{App}, [AIK^+]_{CA-})|]_{AIK-}$  on  $C_{AttApp}$

# Strand Space Diagram Representation

- ▶ Initiate with an attestation request
  - ▶  $d$  abstractly defines desired evidence
  - ▶  $N_{App}$  is the appraiser's nonce
  - ▶  $PCR_m$  selects PCRs
- ▶ Attestation agent selects and executes protocol based on request

# Generating and Certifying an AIK

- ▶ Request a new *AIK* from TPM (optional)
- ▶ Receive *AIK* handle
- ▶ Request  $AIK^+$  signed by CA (*AIK* cert)
- ▶ Receive *AIK* cert encrypted with session key  $K$
- ▶ Receive  $K$  encrypted with public  $EK$

# Activating the AIK

- ▶ Request TPM decryption of the *AIK* cert
- ▶ Receive  $K$  used to decrypt signed public *AIK*
- ▶ Only TPM can gain access to  $K$
- ▶ Only TPM can obtain signed, public *AIK*
- ▶ Oddly, No manipulation of the *AIK* in this “activation” process

- ▶ Request information from measurer
- ▶ Receive evidence  $e$  from measurer
- ▶  $d$  is abstract allowing protocol reuse
- ▶ Most protocols make many requests of the measurer

- ▶ Request a quote from the TPM
  - ▶  $AIK$  identifies the signing  $AIK$
  - ▶  $PCR_m$  identifies desired PCRs
  - ▶  $|(e, N_{App}, [AIK^+]_{CA-})|$  guarantees integrity of returned evidence
- ▶ Receive quote from TPM
  - ▶  $PCR_c$  is PCR composite built from requested PCRs
  - ▶  $[|PCR_c|, |(e, N_{App}, [AIK^+]_{CA-})|]_{AIK-}$  is the signed quote

- ▶ Receive quote from the attestation manager
- ▶ Receive evidence from the attestation manager
- ▶ Evaluate evidence and quote

## 3-4 Slides on Attestation Protocol Execution

## 1-2 Slides on Appraisal

## 3-4 Slides on Measurement

## 2-3 Slides on Communication Mechanisms

Shared notion of AIKCertRequest, AIKCert, and CAResponse JSON structures.

## Attester

- ▶ creates an AIKCertRequest (containing attester  $ID$ ,  $AIK^+$ ) and converts to JSON
- ▶ JSON sent as POST request to CA running as web server

## Certificate Authority

- ▶ POST body bytes  $\rightarrow$  UTF8  $\rightarrow$  JSON  $\rightarrow$  AIKCertRequest
- ▶ looks up  $EK^+$  associated with  $ID$  in sql database
- ▶  $AIKCert = AIK^+$  signed with  $CA^-$
- ▶ generates key  $K$  and encrypts with  $EK^+$
- ▶ AIKCert encrypted with  $K$
- ▶ both wrapped in a CAResponse, converted to JSON and sent as response.

## Properties

- ▶ CA only responds to receiving an *AIKCertRequest*<sub>JSON</sub>
- ▶ The CACert can *only* be decrypted by knowing  $K$  (and therefore  $EK^-$ )

## Appraiser Knowledge after receiving Cert:

- ▶ signature on *AIK* ensures it was CA who generated signature  
+
- ▶ only an entity knowing  $EK^-$  could decrypt and send the CACert  
=
- ▶ **Attester is using a registered TPM**

*Completed four demonstrations culminating in running an attestation protocol in response to an attestation request.*

- ▶ **Attestation and Appraisal development**
  - ▶ CA-Based attestation protocol execution example
  - ▶ integration with Berlios TPM 1.2 emulator
  - ▶ simple dynamic appraisal of attestation results
- ▶ **Measurement development**
  - ▶ on demand Java program measurement
  - ▶ HotSpot-based Java VM run time measurements
  - ▶ standard mechanism for extending measurement capabilities
- ▶ **Communication infrastructure**
  - ▶ vchan, TCP/IP and socket communication infrastructure
  - ▶ language-based interface with TPM 1.2
  - ▶ JSON-based data exchange formats
  - ▶ initial certificate authority API

# Goals and Milestones for 2015

- ▶ Push to the cloud
- ▶ Establish roots of trust and trust argument
- ▶ Executable protocol representation and protocol semantics
- ▶ Operational, integrated vTPM prototype
- ▶ Name Server / Certificate Authority prototype
- ▶ More capable measurement
- ▶ Downloadable demonstration

# Questions and Guidance

- ▶ What problems are interesting?
- ▶ What problem would be a nice attention grabber?
- ▶ What should we be watching and integrating with?
